Art Unit: 1714

The amendment received 13 December 2004 has been made of record.

Claims 14-27 are pending.

The following is a quotation of the second paragraph of 35 U.S.C.

112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 20 and 21 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 14-23 and 26 are rejected under 35 U.S.C. 102(b) as being anticipated by Lent et al.

Claims 14-24 are rejected under 35 U.S.C. 102(b) as being anticipated by Salvin et al.

Claims 14-24 and 26 are rejected under 35 U.S.C. 102(b) as being anticipated by Fanger et al.

Claim 25 is rejected under 35 U.S.C. 103(a) as being unpatentable over Fanger et al.

These rejections are maintained for reasons of record. Applicant's newly added limitations to a "two or more component" system comprising a "first component" and a "second component" are not seen as clearly delineating a "kit" with two individual components. The claims read on a single composition of matter comprising two components in a mixed state.

Art Unit: 1714

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 14-27 are rejected under 35 U.S.C. 102(e) as being anticipated by Hubbell et al.

Hubbell et al teach multilayer polymeric coatings suitable for 3D printing comprising alternating layers of polycationic and polyanionic materials. This polycationic/polyanionic pair is seen as meeting applicant's limitation to "complementary polyelectrolytes". The layers are taught as applied in the form of solutions of the polyelectrolytes which solutions may contain a second binder polymer. Additional polymers taught as suitable include photopolymerizable acrylates. Therefore the reference anticipates the rejected claims.
